GCE O LEVEL — BIOLOGY

Practice Paper WITH SOLUTIONS — 1 h 30

SECTION A : QUESTIONS

1. Name the basic structural and functional unit of living organisms.
2. Define osmosis.
3. Write the word equation of photosynthesis.
4. Give TWO differences between breathing and respiration.
5. Name the vector of malaria and ONE method of preventing the disease.
6. What is a balanced diet ? List its main components.
7. In the food chain : Grass → Grasshopper → Lizard → Hawk, name (a) the producer, (b) one secondary consumer.
8. State TWO ways of preventing HIV/AIDS.

SECTION B : SOLUTIONS

1. The CELL is the basic structural and functional unit of all living organisms.

2. Osmosis is the movement of water molecules from a region of high water concentration to a region of low water concentration through a semi-permeable membrane.

3. Carbon dioxide + Water → (in the presence of sunlight and chlorophyll) → Glucose + Oxygen.

4. Breathing is the physical movement of air in and out of the lungs ; respiration is the chemical breakdown of glucose in cells to release energy. Breathing involves organs (lungs) ; respiration occurs in every cell (mitochondria).

5. Vector : the female Anopheles mosquito. Prevention : sleeping under a treated mosquito net / draining stagnant water / using insecticides.

6. A balanced diet is a diet that contains all classes of food in their right proportions : carbohydrates, proteins, lipids (fats and oils), vitamins, mineral salts, water and fibre.

7. (a) Producer : grass (it makes its own food by photosynthesis). (b) Secondary consumer : the lizard (it eats the grasshopper, a primary consumer).

8. Abstinence ; faithfulness to one uninfected partner ; correct use of condoms ; avoiding unsterilised sharp objects ; screening of blood before transfusion. (Any two.)
